A guide to refer your patients with prediabetes to an evidence-based diabetes prevention program

This important guide is being made available to you by the Chronic Disease Prevention and Health Promotion Section of the Nevada Division of Public and Behavioral Health.

NVDiabetesEd.org

Prevent Diabetes STAT | Screen / Test / Act Today™

Supported by the Nevada State Division of Public and Behavioral Health through grant number 3U58DP004820-02W1 from the Centers for Disease Control and Prevention.
The American Medical Association and the Centers for Disease Control are supporting physicians, care teams and patients to prevent diabetes.

Use this guide to help your patients delay or prevent the onset of type 2 diabetes

Prediabetes is a health condition characterized by blood glucose levels that are higher than normal, but not high enough to be diagnosed as diabetes. Prediabetes increases the risk for type 2 diabetes, heart disease and stroke.

Prediabetes is treatable, but only about 10 percent of people who have it are aware that they do. Left untreated up to one-third of people with prediabetes will progress to diabetes within five years.

During that window of time your patients can benefit from a proven lifestyle change intervention that is part of the National Diabetes Prevention Program (National DPP) led by the Centers for Disease Control and Prevention (CDC).

As part of the National DPP, the American Medical Association (AMA) and the CDC are collaborating to create tools and resources that care teams can use to identify patients with prediabetes, and refer eligible patients to in-person or online diabetes prevention programs.

Physicians and care teams from a diverse group of practices helped the AMA and the CDC create the tools in this guide, and have used them in their own practices to:

- Screen and identify patients for prediabetes
- Refer patients to diabetes prevention programs
- Create feedback loops, linking the patient's progress in the diabetes prevention program back to the practice

Part of a national movement

To achieve CDC recognition as part of the National DPP, programs must provide evidence they are following a CDC-approved curriculum and achieving meaningful results with patients. These programs are based on research showing that a year-long, structured lifestyle change intervention reduced the incidence of diabetes by 58 percent among adults with prediabetes and by 71 percent in those aged 60 years or older.

These programs are successful in part because they require only moderate weight loss to achieve preventive health benefits. Weight loss of 5 to 7 percent of body weight—10 to 14 pounds for a person weighing 200 pounds—led to the results mentioned above.

The AMA and the CDC are promoting these diabetes prevention programs because they are one of the most effective ways to help physicians prevent or delay type 2 diabetes in high-risk patients.

Use this implementation guide and its tools to help identify and refer patients with prediabetes to a diabetes prevention program that is part of the CDC’s National DPP.

How does a diabetes prevention program work?

Diabetes prevention programs that are part of the National DPP use lifestyle change interventions that target improving diet, increasing physical activity and achieving moderate weight loss.

The goal for each participant is to lose ≥5% of body weight by:

- Progressively reducing dietary intake of calories and fat through improved food choices
- Gradually increasing moderate physical activity (e.g., brisk walking) to ≥150 minutes per week
- Developing behavioral problem-solving and coping skills

Features include:

- A year-long structured program (in-person group, online or distance learning) consisting of:
  - An initial six-month phase offering at least 16 sessions over 16–24 weeks
  - A second six-month phase offering at least one session a month (at least six sessions)
- Facilitation by a trained lifestyle coach
- Use of a CDC-approved curriculum
- Regular opportunities for direct interaction between the lifestyle coach and participants
- An emphasis on behavior modification, managing stress and peer support

Who is eligible for referral to a diabetes prevention program?

To be eligible for referral, patients must:

- Be at least 18 years old and
- Be overweight (Body Mass Index (BMI) ≥24; ≥22 if Asian) and
- Have a blood test result in the prediabetes range within the past year:
  - Hemoglobin A1C: 5.7–6.4% or
  - Fasting plasma glucose: 100–125 mg/dL or
  - Two-hour plasma glucose (after a 75 gm glucose load): 140–199 mg/dL or
- Be previously diagnosed with gestational diabetes and
- Have no previous diagnosis of diabetes

Physicians and other health care providers should also use their independent judgment when referring to a diabetes prevention program.
How can patients find a diabetes prevention program near them?
Diabetes prevention programs are available in varied locations such as local YMCAs, wellness centers, faith-based organizations and worksites—as well as in health care facilities. Online versions are also available. Visit nccd.cdc.gov/DDT_DPRP/Registry.aspx or NVDiabetesEd.org, to find a program that is part of the CDC’s National DPP recognition program.

Does health insurance cover patient participation in a diabetes prevention program?
A growing number of private health insurers offer coverage for patient participation in diabetes prevention programs. Several employers include coverage as part of workplace wellness programs. Costs for a full year of program participation are approximately $400–$500. Some program providers offer monthly payment plans and discounts based on ability to pay. The AMA and the CDC continue to advocate for public and private insurance coverage of the diabetes prevention program.

How do I code for prediabetes screening?
Depending on the type of office visit, practices can use several CPT and ICD codes to bill for prediabetes screening and counseling. A list of commonly used CPT and ICD codes is included in this guide.

Feedback from diabetes prevention program to referring clinicians
Most programs send reports of participant progress to referring clinicians after the eighth and 16th group sessions. In addition, participants in the program complete periodic self-evaluations that referring clinicians can request directly from patients.

Sending patient information to a diabetes prevention program provider
Business Associate Agreement
Under the U.S. Health Insurance Portability and Accountability Act of 1996 (HIPAA), a HIPAA Business Associate Agreement (BAA) is a contract that protects personal health information in accordance with HIPAA guidelines. Some physician practices may want to explore whether a BAA is needed to exchange information with a diabetes prevention program. Link to a “Business Associates Agreement” template on AMA’s website:
Engage clinicians
You can prevent type 2 diabetes

**Test your patients for prediabetes and refer those at risk to an evidence-based diabetes prevention program**

You likely know which of your patients is at high risk for type 2 diabetes. Until now you may not have had a resource to help them stop the progression from prediabetes to diabetes. Now, you do.

The American Medical Association and the Centers for Disease Control and Prevention (CDC) have created a toolkit that can help physician practices screen and refer patients to evidence-based diabetes prevention programs without adding a burden to your practice. Visit [preventdiabetesstat.org](http://preventdiabetesstat.org) to learn more.

<table>
<thead>
<tr>
<th>Progression from prediabetes to diabetes can take as little as five years.</th>
</tr>
</thead>
<tbody>
<tr>
<td>During that window of time, your patients can benefit from a proven intervention that is part of the CDC’s National Diabetes Prevention Program (National DPP).</td>
</tr>
<tr>
<td>Counsel your patients that prediabetes is a potentially reversible condition, and one that you can help them manage effectively by:</td>
</tr>
<tr>
<td>1. Screening and Identifying patients for prediabetes</td>
</tr>
<tr>
<td>2. Referring them to a program that is part of the CDC’s National DPP</td>
</tr>
</tbody>
</table>

**This program is evidence-based**

| The diabetes prevention program is a lifestyle intervention based on research funded by the National Institutes of Health that showed, among those with prediabetes, a 58 percent reduction in the number of new cases of diabetes overall, and a 71 percent reduction in new cases for those over age 60. |
| These results were achieved through reducing calories, increasing physical activity, and a weight loss of just 5 to 7 percent of body weight—10 to 14 pounds for a person weighing 200 pounds.* |
| Based on strong evidence of effectiveness in reducing new-onset diabetes, the Community Preventive Services Task Force ([thecommunityguide.org](http://thecommunityguide.org)) now recommends combined diet and physical activity promotion programs like the National DPP, for people at increased risk of type 2 diabetes. |

**Program overview**

| The program empowers patients with prediabetes to take charge of their health and well-being. |
| Participants meet in groups with a trained lifestyle coach for 16 weekly sessions and 6–8 monthly follow-up sessions. |
| These are NOT exercise classes. At these sessions patients learn ways to incorporate healthier eating and moderate physical activity, as well as problem-solving, stress-reduction and coping skills into their daily lives. |

See next page to determine which of your patients is eligible for the diabetes prevention program.

In the average primary care practice it’s likely one-third of patients over age 18, and half over age 65, have prediabetes.

Locating a program

- Programs are offered in varied locations such as local YMCAs, community centers, faith-based organizations, hospitals and worksites, and are also available online.
- Find a program for your patients at cdc.gov/diabetes/prevention and NVDiabetesEd.org.

Eligibility for the diabetes prevention program

A. Inclusion criteria:
- Current age ≥18 years and
- Most recent BMI ≥24 (≥22 if Asian) and
- A positive lab test result within previous 12 months:
  - HbA1C 5.7–6.4% (LOINC code 4548-4) or
  - FPG 100–125 mg/dL (LOINC code 1558-6) or
  - OGTT 140–199 mg/dL (LOINC code 62856-0) or
- History of gestational diabetes (ICD-9: V12.21)

B. Exclusion criteria:
- Current diagnosis of diabetes (ICD-9: 250.xx) or
- Current Insulin use

Consider referring eligible patients:
- At the time of an office visit, and/or
- By generating a list of eligible patients from your electronic health record using a structured query

Physicians and other health care providers should also use their independent judgment when referring to a diabetes prevention program.
Engage patients
Type 2 diabetes is more common in African Americans, Hispanics/Latinos, American Indians, and Asian Americans and Pacific Islanders. For more information, visit us at www.diabetes.org or call 1-800-DIABETES

You weigh less than the amount in the left column (0 points)

Add up your score.

---

If you scored 5 or higher:
You are at increased risk for having type 2 diabetes. However, only your doctor can tell for sure if you do have type 2 diabetes or prediabetes (a condition that precedes type 2 diabetes in which blood glucose levels are higher than normal). Talk to your doctor to see if additional testing is needed.

Type 2 diabetes is more common in African Americans, Hispanics/Latinos, American Indians, and Asian Americans and Pacific Islanders.

For more information, visit us at www.diabetes.org or call 1-800-DIABETES

Visit us on Facebook

**Lower Your Risk**

The good news is that you can manage your risk for type 2 diabetes. Small steps make a big difference and can help you live a longer, healthier life.

If you are at high risk, your first step is to see your doctor to see if additional testing is needed.

Visit diabetes.org or call 1-800-DIABETES for information, tips on getting started, and ideas for simple, small steps you can take to help lower your risk.
COULD YOU HAVE PREDIABETES?
Prediabetes means your blood glucose (sugar) is higher than normal, but not yet diabetes. Diabetes is a serious disease that can cause heart attack, stroke, blindness, kidney failure, or loss of feet or legs. Type 2 diabetes can be delayed or prevented in people with prediabetes through effective lifestyle programs. Take the first step. Find out your risk for prediabetes.

TAKE THE TEST—KNOW YOUR SCORE!
Answer these seven simple questions. For each “Yes” answer, add the number of points listed. All “No” answers are 0 points.

IF YOUR SCORE IS 3 TO 8 POINTS
This means your risk is probably low for having prediabetes now. Keep your risk low. If you’re overweight, lose weight. Be active most days, and don’t use tobacco. Eat low-fat meals with fruits, vegetables, and whole-grain foods. If you have high cholesterol or high blood pressure, talk to your health care provider about your risk for type 2 diabetes.

IF YOUR SCORE IS 9 OR MORE POINTS
This means your risk is high for having prediabetes now. Please make an appointment with your health care provider soon.

HOW CAN I GET TESTED FOR PREDIABETES?
Individual or group health insurance: See your health care provider. If you don’t have a provider, ask your insurance company about providers who take your insurance. Deductibles and copays may apply.
Medicaid: See your health care provider. If you don’t have a provider, contact a state Medicaid office or contact your local health department.
Medicare: See your health care provider. Medicare will pay the cost of testing if the provider has a reason for testing. If you don’t have a provider, contact your local health department.
No insurance: Contact your local health department for more information about where you could be tested or call your local health clinic.
Having prediabetes means you are at increased risk for developing serious health problems such as type 2 diabetes, stroke and heart disease.

You could have prediabetes if you have:
- High cholesterol or
- High blood pressure or
- A parent, brother or sister with diabetes

Your risk goes up if you are also overweight, and/or over age 45.

If you have prediabetes, we can help!

**Ask your doctor how you can stop diabetes before it starts.**

This poster is being made available to you by the Chronic Disease Prevention and Health Promotion Section of the Nevada Division of Public and Behavioral Health.
Are you at risk for prediabetes?

1 in 3 U.S. adults has prediabetes. Most don’t know it. Are you at risk?

You may have prediabetes and be at risk for type 2 diabetes if you:

- Are 45 years of age or older
- Are overweight
- Have a family history of type 2 diabetes
- Have high blood pressure
- Are physically active fewer than three times per week
- Ever had diabetes while pregnant (gestational diabetes) or gave birth to a baby that weighed more than 9 pounds

Prediabetes can lead to serious health problems

Having prediabetes means your blood glucose (sugar) level is higher than normal, but not high enough to be diagnosed as diabetes. But, nearly 90 percent of adults who have prediabetes don’t know they have it.

If you have prediabetes and don’t lose weight or increase your physical activity, you could develop type 2 diabetes within five years. Type 2 diabetes is a serious condition that can lead to health issues such as heart attack, stroke, blindness, kidney failure, or loss of toes, feet or legs.

What can you do?

- Talk to your doctor about your risk of having prediabetes.

Here’s the good news

If you have prediabetes, your doctor may refer you to a proven lifestyle change program that can help you prevent or delay getting type 2 diabetes.

The National Diabetes Prevention Program can help!

The National Diabetes Prevention Program (National DPP) uses a program that is proven to prevent or delay type 2 diabetes, and will help you lower your risk by improving your food choices and increasing physical activity.

How does it work? As part of a group in your community or online, you will work with a trained lifestyle coach to learn the skills you need to make lasting lifestyle changes. You will learn to eat healthy, add physical activity to your life, manage stress, stay motivated and solve problems that can get in the way of healthy changes.

Features

- Trained coach to guide and encourage you
- In-person or online
- CDC-approved program
- Support from others working on the same goals as you
- Skills to help you lose weight, be more physically active and manage stress
- Some insurance companies will cover

What participants are saying …

“I love having a lifestyle coach. She has given us great information, helped me stay on track and stay positive!”

―Bruce

“I’m so excited because I went to the doctor last week and all of my numbers were down and I officially no longer have prediabetes.”

―Vivien

Now is the time to take charge of your health and make a change! Ask your doctor or nurse.

NVDiabetesEd.org
¿Está usted en riesgo de tener prediabetes?

Uno de cada 3 adultos estadounidenses tiene prediabetes. La mayoría de ellos no lo saben. ¿Tiene usted este riesgo?

Es posible que tenga prediabetes y riesgo de tener diabetes tipo 2 si usted:

- Tiene 45 años o más
- Tiene sobrepeso
- Tiene antecedentes familiares de diabetes tipo 2
- Tiene presión arterial alta
- Hace actividad física menos de tres veces por semana
- Alguna vez tuvo diabetes mientras estaba embarazada (diabetes gestacional) o tuvo un bebé que pesó más de 9 libras (4 kilos) al nacer

La prediabetes puede provocar problemas de salud graves.

Tener prediabetes significa que su nivel de glucosa (azúcar) en la sangre es mayor de lo normal, pero no es lo suficientemente alto como para diagnosticarle diabetes. Sin embargo, casi el 90% de los adultos que tienen prediabetes no lo saben.

Si usted tiene prediabetes y no baja de peso ni aumenta su actividad física, podría tener diabetes tipo 2 en el término de cinco años. La diabetes tipo 2 es una afección grave que puede provocar problemas de salud, como ataque cardíaco, accidente cerebrovascular, ceguera, daño al riñón o pérdida de los dedos de los pies, los pies o las piernas.

¿Qué puede hacer?

- Hable con su médico sobre su riesgo de tener prediabetes.

Esta es la buena noticia

Si usted tiene prediabetes, su médico puede remitirlo a un programa de cambios en el estilo de vida, de eficacia comprobada, que puede ayudarlo a prevenir o retrasar la aparición de diabetes tipo 2.

¡El Programa Nacional de Prevención de la Diabetes puede resultar de ayuda!

El Programa Nacional de Prevención de la Diabetes (National Diabetes Prevention Program, National DPP) utiliza un programa que se ha comprobado que previene o retrasa la aparición de diabetes tipo 2, y que lo ayudará a reducir su riesgo mejorando sus elecciones de alimentos y aumentando la actividad física.

¿Cómo funciona? Como parte de un grupo de su comunidad o en línea, usted trabajará con un instructor sobre estilo de vida capacitado, a fin de aprender las habilidades que necesita para hacer cambios en su estilo de vida que sean duraderos. Aprenderá a alimentarse en forma saludable, a incorporar actividad física a su vida, a manejar el estrés, a mantenerse motivado y a resolver problemas que pueden interferir en los cambios saludables.

Características

- Instructor capacitado para brindarle orientación y ayudarlo personalmente o en línea
- Programa aprobado por los Centros para el Control y la Prevención de Enfermedades (Centers for Disease Control and Prevention, CDC)
- Apoyo de otras personas que trabajan por los mismos objetivos que usted
- Habilidades que lo ayudan a perder peso, a hacer más actividad física y a manejar el estrés
- Algunas compañías de seguro lo incluyen en su cobertura

¿Qué dicen los participantes…

"Me encanta tener una instructora sobre estilo de vida. ¡Nos ha brindado información muy útil, me ayudó a cumplir con el programa y a mantener una actitud positiva!".  
—Bruce

"Estoy muy emocionada porque la semana pasada fui al médico y todos mis valores habían disminuido y, oficialmente, ya no tengo prediabetes".

—Vivien

¡Ahora es el momento de ocuparse de su salud y hacer un cambio! Consulte a su médico o enfermero.

Prevent Diabetes STAT | Screen / Test / Act Today™
So you have prediabetes … now what?

Prediabetes means your blood glucose (sugar) level is higher than normal, but not high enough to be diagnosed as diabetes. This condition raises your risk of type 2 diabetes, stroke and heart disease.

What can you do about it?

The good news is that there’s a program that can help you.

The National Diabetes Prevention Program, led by the Centers for Disease Control and Prevention (CDC), uses a method proven to prevent or delay type 2 diabetes. By improving food choices and increasing physical activity, your goal will be to lose 5 to 7 percent of your body weight—that is 10 to 14 pounds for a person weighing 200 pounds.

These lifestyle changes can cut your risk of developing type 2 diabetes by more than half.

How does the program work?

As part of a group, you will work with a trained diabetes prevention coach and other participants to learn the skills you need to make lasting lifestyle changes. You will learn to eat healthy, add physical activity to your life, manage stress, stay motivated and solve problems that can get in the way of healthy changes.

The program lasts one year, with 16 sessions taking place about once a week and six to eight more sessions meeting once a month. By going through the program with others who have prediabetes you can celebrate each other’s successes and work together to overcome challenges.

Some insurance plans will cover the cost of the program. Check with your insurance provider to see if it is covered. Also, some places that provide the program will adjust the fee you pay based on your income.

Why should you act now?

Without weight loss and moderate physical activity, many people with prediabetes will develop type 2 diabetes within five years. Type 2 diabetes is a serious condition that can lead to health issues such as heart attack, stroke, blindness, kidney failure, or loss of toes, feet or legs. NOW is the time to take charge of your health and make a change.

Features of the program:

- A trained coach to guide and encourage you
- A CDC-approved program
- Group support
- Skills to help you lose weight, be more physically active and manage stress

What participants are saying …

“I love having a lifestyle coach. She has given us great information, helped me stay on track and stay positive!”

— Bruce

“I’m so excited because I went to the doctor last week and all of my numbers were down and I officially no longer have prediabetes.”

— Vivien

To find a program in our area that is part of the National Diabetes Prevention Program, visit cdc.gov/diabetes/prevention or NVDiabetesEd.org.
Entonces, usted tiene prediabetes... ¿y ahora qué?

La prediabetes significa que su nivel de glucosa (azúcar) en la sangre es mayor de lo normal, pero no es lo suficientemente alto como para diagnosticarle diabetes. Esta afección aumenta su riesgo de diabetes tipo 2, accidente cerebrovascular y enfermedad cardíaca.

¿Qué puede hacer al respecto?

La buena noticia es que existe un programa que puede ayudarlo.

El Programa Nacional de Prevención de la Diabetes, dirigido por los Centros para el Control y la Prevención de Enfermedades (CDC), utiliza un método que se ha comprobado que previene o retrasa la aparición de diabetes tipo 2.

Al mejorar sus elecciones de alimentos y al aumentar la actividad física, su objetivo será perder del 5 % al 7 % de su peso corporal, es decir, de 10 a 14 libras (4.5 a 6 kilos) en el caso de una persona que pesa 200 libras (90.70 kilos).

Estos cambios en el estilo de vida pueden reducir su riesgo de tener diabetes tipo 2 a más de la mitad.

¿Cómo funciona el programa?

Como parte de un grupo, usted trabajará con un instructor sobre prevención de la diabetes capacitado y con otros participantes a fin de aprender las habilidades que necesita para hacer cambios en su estilo de vida que sean duraderos. Aprenderá a alimentarse en forma saludable, a incorporar actividad física a su vida, a manejar el estrés, a mantenerse motivado y a resolver problemas que pueden interferir en los cambios saludables.

El programa dura un año y consta de 16 sesiones que se realizan alrededor de una vez a la semana y de seis a ocho sesiones más en las que se reúnen una vez al mes. Al avanzar en el programa junto con otras personas que tienen prediabetes, pueden celebrar los logros mutuamente y trabajar en forma conjunta para superar los desafíos.

¿Por qué debería tomar decisiones en este momento?

Si no pierden peso y no hacen actividad física en forma moderada, muchas personas con prediabetes tendrán diabetes tipo 2 en el término de cinco años. La diabetes tipo 2 es una afección grave que puede provocar problemas de salud, como ataque cardíaco, accidente cerebrovascular, ceguera, daño al riñón o pérdida de los dedos de los pies, los pies o las piernas. AHORA es el momento de ocuparse de su salud y hacer un cambio.

¿Por qué debería tomar decisiones en este momento?

Si no pierden peso y no hacen actividad física en forma moderada, muchas personas con prediabetes tendrán diabetes tipo 2 en el término de cinco años. La diabetes tipo 2 es una afección grave que puede provocar problemas de salud, como ataque cardíaco, accidente cerebrovascular, ceguera, daño al riñón o pérdida de los dedos de los pies, los pies o las piernas. AHORA es el momento de ocuparse de su salud y hacer un cambio.

Características del programa:
• Instructor capacitado para brindarle orientación y ayudarlo personalmente o en línea
• Un programa aprobado por los CDC
• Apoyo grupal
• Habilidades que le ayudan a perder peso, a hacer más actividad física y a manejar el estrés

Qué dicen los participantes...
“Me encanta tener una instructora sobre estilo de vida. ¡Nos ha brindado información muy útil, me ayudó a cumplir con el programa y a mantener una actitud positiva!”. —Bruce

“Estoy muy emocionada porque la semana pasada fui al médico y todos mis valores habían disminuido y, oficialmente, ya no tengo prediabetes”. —Vivien

¡Inscríbase hoy mismo en un programa que se lleve a cabo cerca de su hogar!

Letter template

Use/adapt these templates to conduct efficient follow-up and referral with patients who have been identified as having prediabetes

<<YOUR LETTERHEAD>>
<<ADDRESS>>
<<PHONE NUMBER>>

<<DATE>>

<<PATIENT NAME>>
<<PATIENT ADDRESS>>

Dr. Mr./Mrs. <<PATIENT LAST NAME>>,

Thank you for being a patient of the <<PRACTICE NAME HERE>>. We are writing to tell you about a service to help make your health better.

Based on our review of your medical chart, you have a condition known as prediabetes. This means your blood sugar is higher than normal, which increases your risk of developing serious health problems including type 2 diabetes, as well as heart disease and stroke.

We have some good news. Our office wants you to know that you may be eligible for a diabetes prevention program run by our partners, <<NAME OF PROGRAM PROVIDER>>. This program is proven to reduce your risk of developing diabetes and other health problems.

We have sent a referral to <<NAME OF PROGRAM PROVIDER>> and someone will call you to discuss the program, answer any questions you may have and, if you are interested, enroll you in the program.

Please feel free to give <<NAME OF PROGRAM PROVIDER>> a call at <<PHONE NUMBER>>.

–OR–

We have sent a referral to <<NAME OF PROGRAM PROVIDER>> and we urge you to call <<PHONE NUMBER>> to learn more about the program and enroll.

We hope you will take advantage of this program, which can help prevent you from developing serious health problems.

Sincerely,

Dr. <<PHYSICIAN LAST NAME>>
Letter template/Modelo de carta

Use/adapt these templates to conduct efficient follow-up and referral with patients who have been identified as having prediabetes. / Use/adapte estos modelos para realizar un seguimiento y una remisión eficientes de los pacientes a quienes se les ha diagnosticado prediabetes.

<<YOUR LETTERHEAD/SU MEMBRETE>>
<<ADDRESS/DIRECCIÓN>>
<<PHONE NUMBER/TELÉFONO>>

<<DATE/FECHA>>

<<PATIENT NAME/NOMBRE DEL PACIENTE>>
<<PATIENT ADDRESS/DIRECCIÓN DEL PACIENTE>>:

Sr./Sra. <<PATIENT LAST NAME/NOMBRE DEL PACIENTE>>:
Gracias por ser paciente de <<PRACTICE NAME HERE/NOMBRE DEL CENTRO DE SALUD O CONSULTORIO>>. Le escribimos para informarle sobre un servicio que lo ayudará a mejorar su salud.
Según nuestra revisión de su historia clínica, usted tiene una afección conocida como prediabetes. Esto significa que su nivel de azúcar en la sangre es más alto de lo normal, lo que aumenta su riesgo de tener problemas de salud graves, incluidos diabetes tipo 2, enfermedad cardíaca y accidente cerebrovascular.
Tenemos una buena noticia. Nuestro consultorio desea informarle que usted podría cumplir con los requisitos para participar en un programa de prevención de la diabetes administrado por nuestros socios, <<NAME OF PROGRAM PROVIDER/NOMBRE DEL PROVEEDOR DEL PROGRAMA>>. Se ha comprobado que este programa reduce el riesgo de tener diabetes y otros problemas de salud.
Hemos enviado una remisión a <<NAME OF PROGRAM PROVIDER/NOMBRE DEL PROVEEDOR DEL PROGRAMA>>, y alguien le llamará para analizar el programa, responder cualquier pregunta que pueda tener y, si está interesado, inscribirle en el programa.

No dude en contactarse con <<NAME OF PROGRAM PROVIDER/NOMBRE DEL PROVEEDOR DEL PROGRAMA>> llamando al <<PHONE NUMBER/TELÉFONO>>.

O BIEN
Hemos enviado una remisión a <<NAME OF PROGRAM PROVIDER/NOMBRE DEL PROVEEDOR DEL PROGRAMA>>, y le recomendamos enfáticamente que llame al <<PHONE NUMBER/TELÉFONO>> para obtener más información sobre el programa e inscribirse.

Esperamos que aproveche este programa, ya que puede ayudar a prevenir que usted tenga problemas de salud graves.
Atentamente,

Dr./Dra. <<PHYSICIAN LAST NAME/NOMBRE DEL MÉDICO>>
Sample “Talking points” for phone outreach

- Hello <<PATIENT NAME>>.
- I am calling from <<PRACTICE NAME HERE>>.
- I’m calling to tell you about a program we’d like you to consider, to help you prevent some serious health problems.
- Based on our review of your medical chart, you have a condition known as prediabetes. This means your blood sugar is higher than normal, which makes you more likely to develop serious health problems including type 2 diabetes, stroke and heart disease.
- We have some good news, too.
- You may be eligible for a diabetes prevention program run by our partners, <<NAME OF PROGRAM PROVIDER>>.
  - Their program is based on research proven to reduce your risk of developing diabetes and other health problems.

Option A

- We have sent a referral to <<NAME OF PROGRAM PROVIDER>> and someone will call you to discuss the program, answer any questions you may have and, if you are interested, enroll you in the program.
- Please feel free to give <<NAME OF PROGRAM PROVIDER>> a call at <<PHONE NUMBER>>.
- Do you have any questions for me?
- Thank you for your time and be well.

Option B

- We have sent a referral to <<NAME OF PROGRAM PROVIDER>> and we urge you to call <<PHONE NUMBER>> to learn more about the program and enroll.
- We hope you will take advantage of this program, which can help prevent you from developing serious health problems.
- Do you have any questions for me?
- Thank you for your time and be well.
Sample “Talking points” for phone outreach / Modelo de los “puntos de conversación” del contacto telefónico

- Hola <<PATIENT NAME/NOMBRE DEL PACIENTE>>.
- Lo llamo de <<PRACTICE NAME HERE/NOMBRE DEL CENTRO DE SALUD O CONSULTORIO>>.
- Lo llamo para informarle sobre un programa que nos gustaría que tenga en consideración, que lo ayudará a prevenir algunos problemas de salud graves.
- Según nuestra revisión de su historia clínica, usted tiene una afección conocida como prediabetes. Esto significa que su nivel de azúcar en la sangre es más alto de lo normal, lo que causa que usted tenga más probabilidades de tener problemas de salud graves, incluidos diabetes tipo 2, enfermedad cardíaca y accidente cerebrovascular.
- Además, tenemos una buena noticia.
- Usted podría cumplir con los requisitos para participar en un programa de prevención de la diabetes administrado por nuestros socios, <<NAME OF PROGRAM PROVIDER/NOMBRE DEL PROVEEDOR DEL PROGRAMA>>.
  - Su programa se basa en una investigación que se ha comprobado que reduce el riesgo de tener diabetes y otros problemas de salud.

**Opción A**

- Hemos enviado una remisión a <<NAME OF PROGRAM PROVIDER/NOMBRE DEL PROVEEDOR DEL PROGRAMA>>, y alguien lo llamará para analizar el programa, responder cualquier pregunta que pueda tener y, si está interesado, inscribirlo en el programa.
- No dude en contactarse con <<NAME OF PROGRAM PROVIDER/NOMBRE DEL PROVEEDOR DEL PROGRAMA>> llamando al <<PHONE NUMBER/TELÉFONO>>.
- ¿Desea hacerme alguna pregunta?
- Muchas gracias por su tiempo y que le vaya bien.

**Opción B**

- Hemos enviado una remisión a <<NAME OF PROGRAM PROVIDER/NOMBRE DEL PROVEEDOR DEL PROGRAMA>>, y le recomendamos enfáticamente que llame al <<PHONE NUMBER/TELÉFONO>> para obtener más información sobre el programa e inscribirse.
- Esperamos que aproveche este programa, ya que puede ayudar a prevenir que usted tenga problemas de salud graves.
- ¿Desea hacerme alguna pregunta?
- Muchas gracias por su tiempo y que le vaya bien.
Incorporate screening, testing and referral into practice
M.A.P. (Measure, Act, Partner)

THE M.A.P. (Measure, Act, Partner) to prevent type 2 diabetes—physicians and care teams can use this document to determine roles and responsibilities for identifying adult patients with prediabetes and referring to community-based diabetes prevention programs. “Point-of-Care” and “Retrospective” methods may be used together or alone.

Choose and check what works best for your practice

<table>
<thead>
<tr>
<th>Step 1: Measure</th>
<th>When</th>
<th>Who</th>
<th>How (draw from AMA-CDC tools)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Point-of-care method</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>• Assess risk for prediabetes during routine office visit</td>
<td>At the front desk</td>
<td>Receptionist</td>
<td>Provide “Are you at risk for prediabetes?” patient education handout in waiting area</td>
</tr>
<tr>
<td>• Test and evaluate blood glucose level based on risk status</td>
<td>During vital signs</td>
<td>Medical assistant</td>
<td>Use/adapt “Patient flow process” tool</td>
</tr>
<tr>
<td>• Provide “Are you at risk for prediabetes?” patient education handout in waiting area</td>
<td>Nurse</td>
<td>Physician</td>
<td>Use CDC or ADA risk assessment questionnaire at check-in</td>
</tr>
<tr>
<td>• Use/adapt “Point-of-care algorithm”</td>
<td>Other</td>
<td></td>
<td>Display 8 x 11” patient-facing poster promoting prediabetes awareness to your patients</td>
</tr>
<tr>
<td><strong>Retrospective method</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>• Query EHR to identify patients with BMI ≥24 and blood glucose level in the prediabetes range</td>
<td>Every 6–12 months</td>
<td>Health IT staff</td>
<td>Use/adapt “Retrospective algorithm”</td>
</tr>
</tbody>
</table>

| Step 2: Act | | |
| **Point-of-care method** | | | |
| • Counsel patient re: prediabetes and treatment options during office visit | During the visit | Medical assistant | Advise patient using “So you have prediabetes … now what?” handout |
| • Refer patient to diabetes prevention program | Nurse | Physician | Use/adapt “Health care practitioner referral form” |
| • Share patient contact info with program provider* | Other | | Refer to “Commonly used CPT and ICD codes” |
| **Retrospective method** | | | |
| • Inform patient of prediabetes status via mail, email or phone call | Contact patient soon after EHR query | Health IT staff | Use/adapt “Patient letter/phone call” template |
| • Make patient aware of referral and info sharing with program provider | Medical assistant (for phone calls) | Medical assistant (for phone calls) | Use/adapt “Health care practitioner referral form” for making individual referrals |
| • Refer to diabetes prevention program | Other | Other | Use/adapt “Business Associate Agreement” template on AMA’s website if needed |
| • Share patient contact info with program provider* | | | |

| Step 3: Partner | | |
| **With diabetes prevention programs** | | | |
| • Establish contact before making 1st referral | Medical assistant | | Use/adapt “Business Associate Agreement” template on AMA’s website if needed |
| • Establish process to receive feedback from program about your patients’ participation | Nurse | Physician | Refer to “Commonly used CPT and ICD codes” |
| • Establish contact before making 1st referral | Other | | |
| **With patients** | | | |
| • Explore motivating factors important to the patient | During office visit | Office manager | Advise patient using “So you have prediabetes … now what?” handout and provide CDC physical activity fact sheet |
| • At follow-up visit, order/review blood tests to determine impact of program and reinforce continued program participation | Other | Other | www.cdc.gov/physicalactivity |
| • Discuss program feedback with patient and integrate into care plan | | | |

Following the M.A.P. for Preventing Type 2 Diabetes can help your practice achieve Patient Centered Medical Home (PCMH) recognition, as well as Meaningful Use of your electronic medical record. (Supports PCMH recognition via Standard 4: Self-Care Support, B. Provide Referrals to Community Resources (3 points), NCQA Facilitating PCMH Recognition, 2011.)

* To share patient contact information with a diabetes prevention program, you may need a Business Associate Agreement (BAA).

The American Medical Association and the Centers for Disease Control and Prevention have created a tool kit that can help physician practices screen and refer patients to evidence-based diabetes prevention programs. Visit preventdiabetesstat.org to learn more. Physicians and other health care providers should also use their independent judgment when referring to a diabetes prevention program.
Sample patient flow process

MEASURE

CHECK-IN
- If age ≥18 and patient does not have diabetes, provide CDC Prediabetes Screening Test or ADA Diabetes Risk Test
- Patient completes test and returns it
- Insert completed test in paper chart or note risk score in EMR

ROOMING/VITALS
- Calculate BMI (using table) and review diabetes risk score
- If elevated risk score or history of GDM, flag for possible referral

EXAM/CONSULT
- Follow “Point-of-care prediabetes identification algorithm”
- Determine if patient has prediabetes and BMI ≥24 (≥ 22 for Asians) or a history of GDM
- Advise re: diet/exercise and determine willingness to participate in a diabetes prevention program
- If patient agrees to participate, proceed with referral

PARTNER

REFERRAL
- Complete and submit referral form via fax or email

FOLLOW UP
- Contact patient and troubleshoot issues with enrollment or participation

† Use handouts included in this toolkit or request brochures from your local diabetes prevention program provider.
**Point-of-care prediabetes identification**

**MEASURE**
If patient is age ≥18 and does not have diabetes, provide self-screening test (CDC Prediabetes Screening Test or ADA Diabetes Risk Test)
If self-screening test reveals risk, proceed to next step

**RESULTS**

<table>
<thead>
<tr>
<th>Diagnostic test</th>
<th>Normal</th>
<th>Prediabetes</th>
<th>Diabetes</th>
</tr>
</thead>
<tbody>
<tr>
<td>HbA1C(%)</td>
<td>&lt; 5.7</td>
<td>5.7–6.4</td>
<td>≥ 6.5</td>
</tr>
<tr>
<td>Fasting plasma glucose (mg/dL)</td>
<td>&lt; 100</td>
<td>100–125</td>
<td>≥ 126</td>
</tr>
<tr>
<td>Oral glucose tolerance test (mg/dL)</td>
<td>&lt;140</td>
<td>140–199</td>
<td>≥ 200</td>
</tr>
</tbody>
</table>

**PARTNER**
Communicate with your local diabetes prevention program.

**ACT**
- Encourage patient to maintain a healthy lifestyle.
- Continue with exam/consult. Retest within three years of last negative test.
- Refer to diabetes prevention program, provide brochure.
- Consider retesting annually to check for diabetes onset.
- Confirm diagnosis; retest if necessary.
- Counsel patient re: diagnosis.
- Initiate therapy.

**NO**

If no: Patient does not currently meet program eligibility requirements

Review medical record to determine if BMI ≥24 (≥22 if Asian) or history of GDM*

Determine if a HbA1C, FPG or OGTT was performed in the past 12 months

Order one of the tests below:
- Hemoglobin A1C (HbA1C)
- Fasting plasma glucose (FPG)
- Oral glucose tolerance test (OGTT)

*History of GDM = eligibility for diabetes prevention program

Referring patients to a diabetes prevention program

Method 1:

Point-of-care identification and referral
Download and display patient materials
Download and print the practice and patient resources included in this guide in advance of patient visits, so your office can have them available in the waiting room or during consult.

Measure
Step 1 – During check-in: If age ≥18 and patient does not have diabetes, give him/her the “CDC Prediabetes Screening Test” or American Diabetes Association “Diabetes Risk Test”. After patient completes the test and returns it, insert completed test in the paper chart or note risk score in the electronic medical record (EMR). Screening test can also be mailed to patient along with other pre-visit materials.

Step 2 – During rooming/vitals: Calculate the patient’s body mass index. Most EMRs can calculate BMI automatically. Review the patient’s diabetes risk score and if elevated (≥5 on ADA test or ≥9 on CDC test), flag for possible referral.

Step 3 – During exam/consult: Follow the “Point-of-care prediabetes identification algorithm” to determine if patient has prediabetes.
If the blood test results do not indicate prediabetes:
Encourage the patient to maintain healthy lifestyle choices. Continue with exam/consult.

Act
A. If the patient screens positive for prediabetes and has BMI <24 (<22 if Asian):
   - Introduce the topic of prediabetes by briefly explaining what it is and its relation to diabetes (use the handout “So you have prediabetes … now what?”). Review the patient’s own risk factors.
   - Emphasize the importance of prevention, including healthy eating, increased physical activity, and the elimination of risky drinking and tobacco use. (Visit the National Diabetes Education Program’s GAME PLAN to Prevent Type 2 Diabetes for additional patient resources.)
B. If the patient screens positive for prediabetes and has BMI ≥24 (≥22 if Asian):
   - Follow the steps in “A” above, discuss the value of participating in a diabetes prevention program, and determine the patient’s willingness to let you refer him/her to a program.
   - If the patient agrees, complete and send the referral form to a community-based or online diabetes prevention program, depending on patient preference.
   - If patient declines, offer him/her a program handout and re-evaluate risk factors at next clinic visit.

Step 4 – Referral to diabetes prevention program: Most diabetes prevention programs are configured to receive referrals via conventional fax (over a phone line) or secure email. Complete the referral form and submit to a program as follows:
A. If using a paper referral form, send via fax (over a phone line) or scan and email
B. If the referral form is embedded in your EMR, either fax (over a phone line) or email using the EMR
   - Some diabetes prevention programs can also receive an e-fax (over the Internet)

Physicians and other health care providers should also use their independent judgment when referring to a diabetes prevention program.

Partner
Step 5 – Follow-up with patient: Contact patient and troubleshoot issues with enrollment or participation. At the next visit, ask patient about progress and encourage continued participation in the program.
Retrospective prediabetes identification

MEASURE

Query EMR or patient database every 6–12 months using the following criteria:

A. Inclusion criteria:
   – Age ≥18 years and
   – Most recent BMI ≥24* (≥22 if Asian) and
   – A positive lab test result within previous 12 months:
     • HbA1C 5.7–6.4% (LOINC code 4548-4) or
     • FPG 100–125 mg/dL (LOINC code 1558-6) or
     • OGTT 140–199 mg/dL (LOINC code 62856-0) or
     – History of gestational diabetes (ICD-9: V12.21; ICD-10: Z86.32)

B. Exclusion criteria:
   – Current diagnosis of diabetes (ICD-9: 250.xx; ICD-10: E10.x, E11.x, E13.x and O24.x) or
   – Current Insulin use

ACT

Generate a list of patient names with relevant information

Use the patient list to:

A. Contact patients to inform of risk status, explain prediabetes, and share info on diabetes prevention programs, and/or

B. Send patient info to diabetes prevention program provider
   – Program coordinator will contact patient directly, and

C. Flag medical record for patient’s next office visit

PARTNER

Discuss program participation at next visit

* These BMI levels reflect eligibility for the National DPP as noted in the CDC Diabetes Prevention Recognition Program Standards and Operating Procedures. The American Diabetes Association (ADA) encourages screening for diabetes at a BMI of ≥23 for Asian Americans and ≥25 for non-Asian Americans, and some programs may use the ADA screening criteria for program eligibility. Please check with your diabetes prevention program provider for their specific BMI eligibility requirements.
Method 2:

**Retrospective identification and referral**

**Step 1 – Query EMR or patient database**

**Measure**
Query your EMR or patient database every 6–12 months using the following criteria:

A. Inclusion criteria:
   - Age ≥18 years **and**
   - BMI ≥24 (≥22 if Asian) **and**
   - A positive test result for prediabetes within the preceding 12 months:
     - HbA1C 5.7–6.4% **or**
     - Fasting plasma glucose 100–125 mg/dL **or**
     - Oral glucose tolerance test 140–199 mg/dL **or**
   - Clinically diagnosed gestational diabetes during a previous pregnancy

B. Exclusion criteria:
   - Current diagnosis of diabetes **or**
   - Current Insulin use

Generate a list of patient names and other information required to make referrals:

- Gender and birth date
- Email address
- Mailing address
- Phone number

**Act**

**Step 2 – Referral to diabetes prevention program**

A. Contact patients via phone, email, letter or postcard to explain their prediabetes status and let them know about the diabetes prevention program.

B. Send relevant patient information to your local (or online) diabetes prevention program coordinator and have him/her contact the patient directly (may require Business Associate Agreement [https://download.ama-assn.org/resources/doc/prevent-diabetes-stat/x-pub/sample-business-associate-agreement.pdf](https://download.ama-assn.org/resources/doc/prevent-diabetes-stat/x-pub/sample-business-associate-agreement.pdf)).

C. Flag patients’ medical records for their next office visit.

Physicians and other health care providers should also use their independent judgment when referring to a diabetes prevention program.

**Partner**

During the next office visit, discuss diabetes prevention program participation:

- If the patient is participating, discuss program experience and encourage continued participation
- If the patient has declined to participate, stress the importance of lifestyle change and continue to encourage participation (use the handout “So you have prediabetes … now what?”)
### Health care practitioner referral form to a diabetes prevention program

**OPTIONAL**

This publication was supported by the Nevada State Division of Public and Behavioral Health through Grant Number 3US8DP004820-02W1 from the Centers for Disease Control and Prevention.
BMI stands for "BODY MASS INDEX" which is an estimate of total body fat based on height and weight. It is used to screen for weight categories that may lead to health problems.

THE GOAL for most people is to have a BMI in the green area. It is usually best for your BMI to stay the same over time or to gradually move toward the green area.

**These codes may be useful to report services/tests performed to screen for prediabetes and diabetes.**

* Preventive codes 99381-99397 include counseling and cannot be combined with additional counseling codes. If significant risk factor reduction and/or behavior change counseling is provided during a problem-oriented encounter, additional preventive counseling may be billed. In this case, modifier 25 code may allow for payment for both services, although this may vary by payer. Reimbursement for this code is not guaranteed.

† Must be billed with an ICD code indicating a BMI of 30 or greater. Medicare does not allow billing for another service provided on the same day.
